Bollettino Postale 896 22.pdf 549e569275

Facsimile reproduction of a book page. Micro & Nano Electro Mechanical Systems (MEMS & NEMS) are small mechanical elements, (usually in the range of a few 100 μm to a few 10's μm) that have both electrical and mechanical functions. A Nano electro mechanical system (NEMS) is a similar but much smaller version than the Micro Electro Mechanical Systems (MEMS). Common applications include pointing devices in laptop computer screens and much smaller versions of the drum and inkjet print heads found in printers and faxes.

The recent explosion in the use of nanoparticles has led to the development of NEMS sensors that can function at the molecular level. Nanoparticles can be easily directed to move or stop. These are then assembled into functional elements, such as microswitches, microvalves,

microcantilevers, and microbeams. NEMS are being increasingly used in the medical field to develop new diagnostic products for the early detection of cancers and infectious diseases (eg. HIV and SARS), molecular imaging of tumors, and prosthetic devices. 6d1f23a050
